

What is good quality in tertiary e-learning?

John Milne
Massey University

Tertiary teaching requires a depth of understanding on the principles of effective learning to help students grow into professionals. These principles will include aspects such as engagement, learning context, challenge and practice. This workshop will discuss quality in e-learning and present some principles that aim to support academics in implementing high quality e-learning environments. The participants will discuss whether and how these principles support academics to achieve world class e-learning and will also consider how such principles might be applied to their own e-learning environments.
